

Samantha Grover

This Leadership Development Grant provided Samantha Grover with some of the funds she needed for her participation in the Homeward Bound Leadership program.

Dr Grover was one of 76 women scientists from all over the world that travelled together in a small ship to Antarctic waters for 20 days. The program helped develop her leadership skills as a conservationist and scientist.

As a soil scientist, Dr Grover completed a TedX talk entitled “Can food help solve climate change?” in early 2020 and you can find it on YouTube at <https://youtu.be/-wKA6JQQBSE>
